

*Look out for your eyesight.*

Remember...

*OPTretina* offers the photographic examination that could save your sight.

A *simple, quick and painless* examination that can detect the possible onset of blindness and other pathologies.

Our retina experts will examine your retina and issue their report within *48 hours*.

Your results will be sent to your *personal* optician.

*Let us take care of them.*

*If in doubt, consult your optometrist.*

Retinal photography is a simple and harmless method of ruling out many macular conditions (the macula is the central part of the retina). It cannot substitute for a complete examination and diagnosis by an ophthalmologist, but it has proven effective in the screening and early diagnosis of the main causes of blindness in this country.

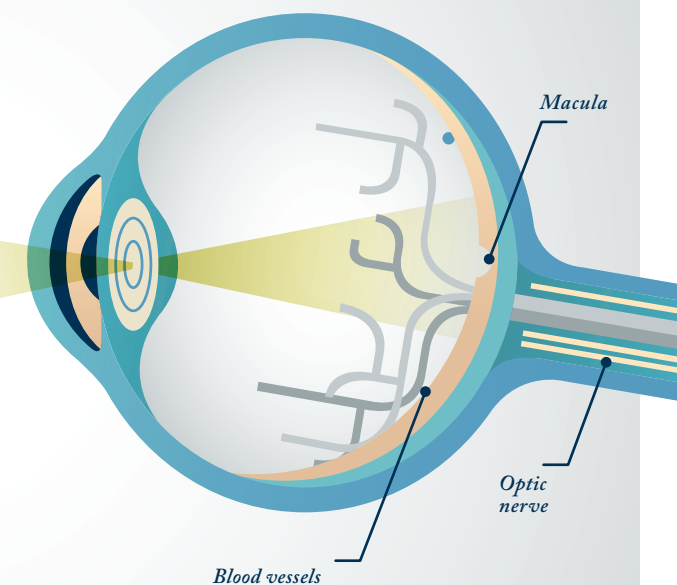

Telemedicine has proven very effective in the early diagnosis of the main pathologies that cause blindness, but it is not proposed as a substitute for full examination by an ophthalmologist. OPTretina complies with all data protection and safety legislation.

Did you know that your *optometric examination* is not complete if it does not include your retina ?

The answer is in your *retina*.

Preventing blindness together

According to the WHO, 80% of blindness is preventable and a simple check-up could save your eyesight.

*OPTretina can help you to keep your eyes healthy.*

### Why OPTretina ?

**It's easy.**

Just one photograph will do.

**It's quick.**

Your results are returned to you within 48 hours.

**It's affordable.**

It costs much less than you think.

**It's near you.**

Ask at your optician's.

### How does OPTretina work ?

**1. Basic information test**

Your optician will perform a short test to find out more about you and your eyes.

**2. Photograph of your retina.**

Your optician will take a photograph of your retina, without having to dilate your pupils.

**3. Medical report**

Our retina experts will analyse your photograph and issue a report within 48 hours.

**4. Results in person**

Your optician will return your results to you and explain the findings.

OPTretina is for everybody. However, certain groups are at a higher risk of blindness.

**Diabetics**

Most blindness in this country is diabetes-related. Diabetics are advised to undergo retinal examinations at least yearly.

**Over 50s**

The leading cause of blindness in the over 50s is age-related macular degeneration (AMD).

**Other risk factors**

Family history, smoking.

*It is normal not to experience symptoms in the early stages.*

*Get your retina checked to rule out possible damage in the future.*
